Summary

AI/ML and Backend Engineering undergraduate with hands-on experience in LLMs, distributed systems, scalable APIs, and MLOps workflows. Skilled in FastAPI, PyTorch, Ray, Docker, Redis, FAISS, CI/CD, and cloud infrastructure. Interested in production AI systems, inference optimization, intelligent automation, and applied machine learning.

Education

RV College of Engineering (RVCE)

Bachelor of Engineering in Computer Science and Engineering — CGPA: 7.74

2022 – 2026

Bengaluru, Karnataka

Baldwin Academy

Senior Secondary Education (CBSE - Class XII) — Percentage: 74%

2020 – 2022

Patna, Bihar

G.D. Goenka Public School, R K Puram

Secondary Education (CBSE - Class X) — Percentage: 84%

2010 – 2020

Danapur, Patna, Bihar

Experience

L&T Technology Services

AI & ML Engineering Intern

Aug 2025 – Nov 2025

Bengaluru, India

- Optimized distributed ML pipelines using Ray, reducing training latency by 20–30% across compute-intensive workloads.
- Enhanced CI/CD workflows with automated testing, deployment validation, and monitoring integration for scalable ML environments.
- Improved reproducibility and deployment consistency across production ML environments and inference services.

Projects

AI Research Analyst — Python, FastAPI, React, Redis, ChromaDB, Docker

2026

- Built a production-grade multi-agent AI system with a Planner → Research → Analyst → Critic pipeline and typed A2A messaging.
- Implemented dual-memory architecture using Redis for short-term session state and ChromaDB for semantic long-term retrieval.
- Developed FastAPI backend services, a React + Vite dashboard, and Dockerized deployment workflows for the full stack system.
- Added 60+ tests with GitHub Actions CI, structured logging, and graceful fallbacks for missing services or API keys.

AI-Powered Digital Lending Platform — C#, .NET 10, ONNX Runtime, Semantic Kernel, Razorpay

2026

- Built a production-grade fintech platform with Clean Architecture, CQRS, JWT authentication, and Blazor WebAssembly frontends.
- Implemented ONNX-based credit scoring, loan recommendations, anomaly detection, and borrower financial health assessment.
- Integrated Razorpay workflows for EMI payments, auto-debit mandates, payouts, refunds, disputes, and webhook processing.
- Added observability with OpenTelemetry, background jobs for repayment and NPA workflows, and role-based admin controls.

Network Anomaly Detector — Python, XGBoost, Zeek, Streamlit

2026

- Built an anomaly detection pipeline that parses Zeek 'conn.log' data using header-based feature extraction from real network traffic logs.
- Trained an XGBoost classifier on a stable feature schema with validation checks for missing or incompatible inputs.
- Generated prediction reports with connection metadata, confidence scores, and timestamps for downstream analysis.
- Created a Streamlit dashboard to run the pipeline and review outputs through an interactive UI.

Skills

- **Languages:** Python, C, C++, SQL, Shell Scripting
- **AI/ML:** LLMs, RAG, Multi-Agent Systems, Prompt Engineering, Inference Optimization, Model Fine-Tuning, Semantic Search
- **Frameworks:** FastAPI, PyTorch, LangChain, LangGraph, scikit-learn, XGBoost, Ray, Ray Serve
- **Backend & Systems:** REST APIs, Microservices, Distributed Systems, Async I/O, Load Balancing, API Orchestration
- **Databases & Storage:** PostgreSQL, MySQL, Redis, FAISS, Vector Search
- **DevOps & Tools:** Docker, CI/CD, GitHub Actions, Linux, Monitoring, Containerized Deployments
- **Cloud & Infrastructure:** Azure, GCP, Local Cloud Servers, Distributed Compute Environments, Scalable Deployment Pipelines

Certifications

Agentic AI (Google & Kaggle) — Linux Kernel Programming (Udemy) — Programming in C (Infosys)
